Microsoft Windows Server Platforms 2000 \ 2003 \ 2008

Apple Macintosh \ iOS Platforms

Active Directory Implementation \ Group Policies

PREVIOUS WORK HISTORY

Doug began his technical career in 1997, doing IT work part time for employers while in college. His first full-time network administration job was for a public school district, managing two elementary schools with several hundred users. He then moved on to a corporate IT environment, working in a corporate headquarters IT setting as Technical Support Coordinator, supporting 20+ locations on the East Coast of the US.

He entered IT consulting in 2004 with a Binghamton, NY-based IT services company and became their Director of Technical Services, overseeing a team of technicians doing a wide variety of projects and working closely with sales staff to develop new business. He left this business to co-found Avant IT Consulting in 2008, which was purchased by ForwardBusinessSolutions in 2010.

SELECTION OF NOTABLE RECENT PROJECTS

Planned and implemented an Active Directory migration for a local school district from version 2003 to 2008 – 900 users, 300 workstations, and 8 servers including migration from Exchange 2003 to 2010. Previously facilitated same district in 2006 for migration from Active Directory 2000 to 2003. Implementation resulted in streamlined operation and a better experience for the on-site IT staff. (2011)

Consultant for Small Business Server 2003 to 2008 migration for Binghamton-area systems engineering firm; worked with employees and Avant IT staff to migrate server and bring 25 workstations online in one eight-hour workday. (2009)

Planned and carried out employer disaster recovery plan during the June 2006 flood, when company offices received 3.5 feet of water in the first floor. The plan resulted in employer having a backup location for servers and Internet access and in spite of needing to move servers (16), the company and customer's systems experienced 4 hours of downtime from power cut-off to relocation. (2006)
